

OMEKA ENGINEERING (PVT) LTD

Website Requirement & Scope Document

Initial requirement brief for web developers / agencies

Document Purpose

This document provides the initial scope and key requirements for developing a professional corporate website for Omeka Engineering (Pvt) Ltd. The intention is to establish a clear digital presence for Sri Lankan and international clients while keeping the first-stage website simple, practical and cost-effective.

Important: This is an initial website scope, not a request for a large or complex web platform. The website should be clean, professional, responsive and easy to maintain.

1. Company Background

Omeka Engineering (Pvt) Ltd operates in the building and construction industry, providing Construction, Maintenance Services, Supply Solutions and Consultancy. The company profile also presents Omeka Engineering and Omacs Engineering as working together under a unified group structure. The company has project experience across Sri Lanka and the region, with a multidisciplinary capability covering areas including steel, stainless steel, aluminum, glass, interiors and waterproofing.

2. Website Objectives

- Create a professional online identity for Omeka Engineering.
- Provide a better alternative to sending the company profile PDF to clients.
- Clearly communicate the company's main services and capabilities.
- Showcase selected completed and ongoing projects in Sri Lanka and international markets.
- Build credibility with contractors, consultants, developers, businesses and international clients.
- Make it easy for potential clients to contact Omeka and submit project inquiries.
- Create a foundation that can be expanded later without redesigning the entire website.

3. Initial Site Map

HOME	Main company introduction, key services, featured projects and clear contact / inquiry call-to-action.
ABOUT US	Company overview, experience, group structure and key strengths.
SERVICES	Main service categories and short descriptions of capabilities.
PROJECTS	Selected Sri Lankan and international projects with photographs and basic project information.
CONTACT	Contact details, location, inquiry form and direct contact options.

4. Main Page Requirements

Home

- Strong, modern hero section representing Omeka as a construction and engineering solutions company.
- Short company introduction — avoid long paragraphs.

- Highlight the main service areas.
- Show selected / featured projects.
- Highlight Sri Lankan and international project experience.
- Prominent 'Contact Us' / 'Request a Quote' call-to-action.

About Us

- Professional company overview based on the existing company profile.
- Brief explanation of Omeka Engineering and its group structure.
- Experience and strengths, including the existing '20+ years of collective experience' positioning.
- Mission / vision / values can be included in a concise format.
- Use authentic company/team/project photography where available.

Services

The website should present the existing four main service areas without making the page unnecessarily complex:

- **Construction** — Steel Structures, Stainless Steel Works, Aluminum & Glass, Interior Works, Waterproofing and related construction works.
- **Maintenance Services – FixingMate®** — Periodic maintenance, urgent/critical repairs and general upkeep / facility-related services.
- **Supply Solutions** — Construction materials, machinery and accessories sourced through the company's supplier network.
- **Consultancy** — Steel structure guidance / value engineering and interior design-related consultancy.

Projects

- Projects should be presented visually, with strong photographs.
- Allow projects to be identified by location, such as Sri Lanka or international markets.
- Each project can contain a project title, location, category, short scope and photographs.
- The system should allow new projects to be added later through a simple admin/CMS interface.
- Only client/project information approved by Omeka should be published.

Contact

- Company phone number and email.
- Company address / location.
- Simple inquiry / contact form.
- Optional 'Request a Quote' button linked to the inquiry form.
- Map/location section.
- International-friendly contact formatting.

5. Design & User Experience Requirements

- Modern, premium and professional corporate appearance.
- Construction / engineering identity without looking like a generic contractor template.
- Clean layout with strong typography and generous whitespace.
- Use real Omeka project photographs as the main visual content wherever possible.

- Professional and restrained colour palette aligned with the company's existing corporate identity.
- Simple navigation and clear calls-to-action.
- Avoid excessive text, unnecessary animation, clutter and overly complicated graphics.

6. Technical Requirements

- Primary domain should preferably be a suitable **.com** domain for international positioning (subject to availability).
- Mobile, tablet and desktop responsive design.
- Fast loading performance and image optimization.
- SSL / HTTPS security.
- Basic SEO-ready structure and metadata.
- Easy-to-use CMS/admin system for updating projects and basic website content.
- Contact form with reliable email notification.
- Basic website analytics integration.
- Developer should clearly state hosting, domain, maintenance and renewal costs separately in the quotation.

7. Content & Media

Initial website content will be developed from the existing Omeka Engineering company profile and additional information/images supplied by the company. The developer should advise on the required image sizes, formats and quantities before development.

8. International Client Considerations

- Website should be English-first and written in professional international business English.
- International projects should be clearly visible rather than hidden among local projects.
- Website should communicate reliability, capability and professional project experience.
- The structure should allow additional countries/projects to be added in the future.

9. Expected Developer Deliverables

- Website design and development according to the agreed scope.
- Responsive version for mobile, tablet and desktop.
- CMS/admin access for agreed editable content.
- Domain and hosting setup assistance, if required.
- Contact form setup and testing.
- Basic SEO setup.
- Website security / SSL setup.
- Testing across common browsers and devices.
- Basic handover / training for the company representative.
- Post-launch support period to be stated clearly in the quotation.

10. Quotation Request to Developer

Please provide a quotation based on the above initial scope. The quotation should clearly separate:

- Website design & development cost
- Domain cost
- Hosting cost
- CMS / software licensing cost, if any
- Maintenance / support cost
- Optional features or upgrades
- Estimated development timeline
- Payment schedule
- Warranty / post-launch support period

11. Scope Philosophy

The first version should remain a **simple, premium corporate website**. The priority is to present the company professionally, explain the main services, show credible project experience and generate inquiries. Advanced functions such as e-commerce, client portals, large product catalogues, multilingual systems or complex integrations are not required in the initial phase unless separately proposed and approved.

Omeka Engineering (Pvt) Ltd
